HANSATON hearing systems for a new level of freedom

Innovative by tradition:

Since the inception of HANSATON in Hamburg, Germany, we have been striving to provide exceptional, cutting-edge products with impeccable design to our exclusive partners and their clients.

We have a driving passion to help people hear better. We deliver on that passion with esthetically pleasing designs so people can be proud to use our hearing systems.

STRATOS is an incredible new step on this journey.

We invite you to join us...

Together we can provide premium designs and innovative technology for exceptional hearing and emotions.

A New Dimension of HearIntelligence™

HearIntelligence technology was developed by HANSATON with the goal of enhancing natural functions and processes in human hearing.

HearIntelligence technology senses the acoustic environment as closely as possible to the way nature does. It uses advanced innovative technologies to support the complex interactions between the incoming sound, the hearing organs and the brain. Smooth interactions between each feature are designed to recreate multidimensional hearing for realistic connections with the acoustic environment in a multitude of social situations.

The PRISM™ chip, with double the memory, opened up further possibilities for HearIntelligence technology to reach new heights with STRATOS.

INTELLIGENT AUTOSURROUND

FOCUSING ON SPEECH

LOCALIZATION OF ACOUSTIC SIGNALS

WIRELESS CONNECTIVITY

HEAR Intelligence™

Let's have a closer look...

Learn more about HearIntelligence™ technology and how it helps your clients get back in touch with the world around them:

INTELLIGENT AUTOSURROUND

Continuous adaptation to the acoustic environment for more exact signal processing

Acoustic detectors precisely and quickly monitor the surrounding acoustic environment hundreds of times per second. This occurs automatically without the need for interaction, so the brain can more easily focus on processing and integrating the signals received. HANSATON hearing systems react rapidly and accurately to changes in the world of sound around them.

SurroundSupervisor | **UPDATED:** Intelligent AutoSurround | AutoStream (SpeechStream, MusicStream)

FOCUSING ON SPEECH

Distracting noise filtered out, with focus placed on speech

A person with normal hearing is able to filter out distracting noise to permit concentration on a desired sound source. Hearing aids equipped with HearIntelligence technology are designed to help perform this task for users, i.e. to focus on speakers and block out nonrelevant background sounds, regardless of the direction they are coming from. More focus on speakers helps to understand what is said without unwanted distractions.

UPDATED: Dynamic SpeechBeam | **UPDATED:** SpeechBeam | ConversationOptimizer | ConversationBoost | ConversationLift

All comparisons mentioned here and further on refer to STRATOS and previous HANSATON products.

LOCALIZATION OF ACOUSTIC SIGNALS

Localization of sound sources for a multidimensional hearing experience

A good sense of spatial awareness is essential for anyone in new or changing surroundings. Sound source localization provides fixed points for spatial orientation and for focusing on specific sound sources. The natural factors relevant for spatial localization, such as ear shape and head dimensions, are emulated by HearIntelligence technology. The intended result: minimizing the impact of missing acoustic cues typically lost when wearing hearing aids.

SphereSound Natural | SphereSound

COMFORT IN NOISE

Suppressing interfering noise for more comfort

Persons with non-impaired hearing can usually ignore disturbing noise and concentrate instead on the important sounds they want to hear. HANSATON's HearIntelligence technology supports this process by processing incoming sound and reducing it to essential components that are either boosted or suppressed, providing an optimized hearing experience for hearing aid users.

NEW: Intelligent NoiseReduction | Sound Impulse Manager | Active Wind Block | FeedbackManager | Tinnitus Manager

PERSONALIZED ADJUSTMENTS

Adjustments for a personalized and optimized hearing experience

Acoustic environments are made up of numerous components of sounds, including speech and noise at constantly varying levels. The brain uses these signals to determine what information is useful and what is not. HANSATON hearing systems provide something that everyone wants: an approach that supports an easy, well-received first fit. The audio levels can automatically adapt over time to reach target. HANSATON hearing systems can also deliver a comfortable first fit experience and confident selection of devices and technology levels, making the whole process of getting hearing systems quite relaxed.

FocussedFit | Intelligent Acclimatization | DataLogging | **NEW:** Lifestyle Analyzer

WIRELESS CONNECTIVITY

Powerful interfacing options, smart multimedia solutions

For HANSATON hearing system users, quick and intuitive connectivity to TVs and smartphones is something they don't have to do without. HANSATON hearing aids are designed with HearIntelligence technology to promote ease of use and excellent tone quality – even in diverse and demanding multimedia applications.

Our goal: natural hearing The result: STRATOS vibrant sound processing

With STRATOS we come even closer to preserving natural hearing, ensuring audibility and highlighting speech.

Let's have a closer look...

Sound waves are transmitted to the auditory nerve by the cochlea with very distinctive patterns. These patterns, unique by frequency and by input level, are the key to our brain's natural hearing. With hearing loss, these excitation patterns are compromised, impairing our natural hearing.

By replicating how our ears transmit soft to loud and low to high frequency sounds to our brains STRATOS aims to make sounds as natural as possible. With the goal of restoring natural hearing, our new vibrant sound

processing model is designed to replicate the cochlea's excitation patterns in frequency and level.

Our temporal processing smooths the gain to preserve speech dynamics while providing the levels needed for audibility. With the PRISM™ chip, this adaptive algorithm can live-monitor vocal onsets and envelopes as well as environmental sounds to match the acoustic situation. This helps maintain audibility for the envelope and fine structure of sound, which are critical to hearing both speech and music.

The new vibrant sound processing model is active in all our STRATOS hearing systems right from the first fit, which can provide your clients with a more natural listening experience and better sound right from the start.

Intelligent speech focus

HANSATON has achieved a new level of hearing performance thanks to improved innovations with STRATOS.

Dynamic SpeechBeam with Intelligent NoiseReduction

Dynamic SpeechBeam helps your clients to focus on a conversation partner in difficult listening environments, regardless of which direction the speech is coming from – by its binaural 360° speech recognition capability.

Intelligent NoiseReduction is designed to highlight speech from the front by canceling intense background noise from beside and behind.

Together, Dynamic SpeechBeam and Intelligent NoiseReduction help provide better opportunities for your clients to hear in acoustically challenging situations... like enjoying a relaxed conversation in the kitchen, while preparing a smoothie.

Equipped for everyday life

Exceptional hearing experiences

Intelligent AutoSurround with AutoStream, ConversationOptimizer & ConversationBoost

Based on seven types of environments, Intelligent AutoSurround can automatically manage the adaptation to changing listening situations. While streaming from a device, AutoStream automatically differentiates sound types, so both speech and music can be treated uniquely. Soft voices and quiet conversations often pose challenges for people with hearing loss. ConversationBoost identifies soft speech sounds and boosts them up above the background noise to make quietly spoken words easier to hear.

Among the toughest situations facing people with hearing loss are group conversations with numerous loud discussions taking place at the same time. ConversationOptimizer was designed to highlight speech, particularly in intense background noise. Using binaural 360° speech recognition capability, it was designed to focus on speech – even if people are talking from the side or behind. Let's make sure next time your clients raise their glasses they're fully equipped to enjoy participating in the conversations.

Update in scout 5.3:
Support for the new HANSATON jazz ST ITEs
Updated Lifestyle Analyzer with new Speech Locator information to help select the performance level that best meets your client's needs

The first impression counts

First fittings in scout

The first fit of new hearing aids makes a critical first impression with your clients. It is therefore extremely important to offer them a great hearing experience right from the start: so STRATOS was designed from the ground up to include smooth Intelligent Acclimatization from the first fit to final settings. Intelligent Acclimatization expands HANSATON's BalanceFit fitting approach to meet the needs of first time

and experienced users. It adjusts the balance between high and low frequencies with more emphasis on low frequencies for first time users, to increase spontaneous acceptance. This delivers balanced sound at the comfortable level they want then automatically and gradually advances them to the level they need. Easy set-up of the Intelligent Acclimatization in scout helps you achieve a great first fit experience for your clients.

Find the right level for your client

The right level for every need

Making decisions easy

Lifestyle Analyzer: Support your clients in their performance level decisions!

The Lifestyle Analyzer is great with new clients: fit them with myChoice, HANSATON's programmable trial devices, and review their personal lifestyle after 1-3 weeks. You'll be able to make a personalized, fact-based recommendation about which performance level is best for them.

Selecting the right performance level is crucial to your client's success with their hearing aids. However, they often find it difficult to describe the types of acoustic situations they encounter most often. Wouldn't it be ideal if you could travel with them to hear their environments and know how challenging they typically are?

That's exactly what the Lifestyle Analyzer allows you to do. Your client's hearing aids can monitor their listening environments and report back to you how much time they spend in each type.

The visualizations in scout allow you to involve your client in the decision-making process by simply and objectively seeing how well each performance level matches their lifestyle.

You can move from being a salesperson to being an advisor to find the right performance level for your client... together!

TIP

The **Speech Locator** information can help you select the performance level that matches your client's personal listening lifestyle for speech and other sounds around them.

The **Lifestyle Analyzer** helps you to analyze, visualize and explain the different performance levels.

Find the right pre-set

Each client's needs and priorities are different, especially when it comes to ultra power hearing systems. So for the UP hearing aids there are three pre-sets to get a more personalized start.

Classic	Modern	Active
Your client is a long-time power hearing system wearer. Omni microphones provide the stable acoustic base for the classic sound processing. The amplification focuses on the audibility of ambient sounds and speech.	Your client tends toward modern signal processing and reduced directionality. They prefer greater amplification with a focus on speech intelligibility and reduced ambient sounds.	Your client prefers active signal processing and maximum feature effect with maximum directionality. The focus lies on speech intelligibility at the highest level of comfort.

Simply start your adjustment with one of the three pre-sets and benefit from quicker adjustment success and spontaneous acceptance.

ITE hearing systems – smart and discreet

Custom-made for your clients

Our custom-made ITE solutions offer great sound performance and individual discreetness. Whether tiny or trendy, customers will experience outstanding sound performance and easy handling.

STYLISH AND WIRELESS

Hidden in plain sight – the black edition of the jazz ST 312 Dir W looks like regular wireless earbuds, yet offers all the functionality and comfort of custom-made hearing aids.

jazz ST 10

The jazz ST 10 is our smallest ITE solution. Powered by a traditional 10 battery it offers a tiny custom size with optional push button, telecoil, and IIC Remote control.

jazz ST 312

For longer battery life, the jazz ST 312, powered by a traditional 312 battery, can be adjusted by a volume control or push button and can be fitted with an optional telecoil.

jazz ST 312 Dir W

With all the advantages of wireless connectivity, the jazz ST 312 Dir W combines custom style with the full binaural and wireless feature set of STRATOS. Powered with a traditional 312 battery, it offers optional volume control and push button and is compatible with Bluetooth® phones and wireless accessories.

TIP

Help ensure durability and fewer repairs with the HADEO Clean & Care line by HANSATON

Rechargeable: Up to 24 hours of runtime

Advanced Lithium-ion technology gives the hearing instruments up to 24 hours of runtime between charges.

COMFORT CHARGER COMBI

This Comfort Charger Combi is a charger and protective hard case in one. With the help of optional HADEO drying capsules, it also dries hearing systems when closed.

Dry, protect, charge!

COMFORT POWER PACK

The Comfort Power Pack has a built-in, non-removable Lithium-ion battery that can charge hearing systems up to seven times – for easy on-the-go charging all day long.

Freedom on the road!

HANSATON CHARGER

The smaller HANSATON Charger combines charging comfort and attractive design. With a maximum charging time of three hours, hearing systems with Lithium-ion batteries can be charged.

Small but powerful!

Recommending the matching charger

Check at one glance which chargers are compatible with STRATOS hearing systems and support your customers in making the right choice for their lifestyle.

Rechargeable Runtime (charging from 0% to 100% in less than 3 hours)

- Up to 24 hours: Without streaming
- Up to 16 hours: AirStream technology (TV Connector / PartnerMic)
- Up to 11 hours: Bluetooth® phone and music streaming

Accessories
for every hearing
situation – easy
to connect

Wireless accessories for more freedom

Convince your clients with helpful accessories that make understanding easier¹ and enable optimal use of more listening sources.

TV Connector^{2,3}

The TV Connector makes it easy to send the audio from TVs and other audio devices, such as stereo systems, directly to the hearing aids. Multiple hearing aid wearers can watch TV or movies or listen to music from up to 15 meters away from their TV Connector.

Remote Control³

The Remote Control is beautiful, handy and easy to use. The large, clearly labeled buttons make it very easy to adjust the volume. The listening environment or program can also be easily changed using this device.

PartnerMic³

The remote microphone with its optimized design and performance can be easily attached to the clothing of a conversation partner with its integrated clip. It has excellent sound quality and battery performance. The PartnerMic is a real asset, especially in acoustically challenging situations.

RogerDirect™

Hearing system wearers can benefit from the proven performance of Roger™ technology in noise and over distance¹, streaming directly to STRATOS hearing systems. Roger microphones have the ability to distinguish the direction of incoming speech and give the flexibility to focus on all conversation.

roger

Easier to use thanks to connectivity features

New connectivity options offer your clients more dimensions for interacting with their hearing systems.

Choose from new situational app programs

New sound personalization features

Reduce noise at the touch of a button

Enhance conversations at the touch of a button

Personalized hearing experience

Clients who own smartphones want the option to personalize their listening experience. We now provide easy as well as slightly more advanced ways for clients to do just that.

Note: Changes your clients make in the app are visible in scout fitting software.

Tap control¹ – easy and effortless for your clients in everyday situations

Control mobile phone devices with a simple double tap on the ear:

- Accept & end phone calls
- Play & pause audio streaming
- Trigger your voice assistant (e.g. Siri, Google Now™ service...)

Hands-free phone calls with any Bluetooth® capable device²

Two connections in one

By improved Bluetooth® functionality it is now possible to connect two phones or tablets at once: Listen to music from one device, then answer a phone call on the other!

¹ Available on rechargeable STRATOS hearing aids.
² Smartphones and traditional mobile phones with compatible Bluetooth® profiles. Siri is a trademark of Apple Inc. Google Now service is a trademark of Google LLC.
