Logond					
Legend	Test conditions				
Standard Power Moderate Power Power Ultra Power	Lithium-Ion rechargeable battery; Source: voltage 3.8 V * Typical operating time of the rechargeable battery is based upon a combination of Bluetooth® streaming and regular hearing instrument usage. The measurements obtained with a closed configuration using an HA-1 coupler (ANSI-3.7-1995). The hearing instrument set to HANSATON scout test settings. LLE is applied at an approximate level of 35 dB SPL.				
	Domes should never be fit on patients with perforated eardrums, exposed middle ear cavities, or surgically altered ear canals. In the case of such a condition, we recommend use of a customized earmold. We reserve the right to change specification data without notice as improvements are introduced.				
WARNINGS: This hearing instrument has an output sound pressure level that can exceed 132 dB SPL. Special care should be taken when fitting this instrument as there is a risk of impairing the residual hearing of the user. Changes or modifications to the hearing aid that are not explicitly approved by the manufacturer are not permitted. Such changes may damage the ear or the hearing aid.
